

French Canadian Thrilled

New Radio Alert Receiver

Old Mac Didn't Mourned To
His Gains Cautious

"Bravo, bravo, Jean Anglin!" (Bravo, the brave young English girl)—these words about in French by a tall, grizzled, little man with tears in his eyes, expressed the sentiment with which the old French Canadian city greeted pretty Flora Wright, and the ballroom-armed rascals, Jean Dore, they arrived at Quebec city hall square, in the shadow of the monument erected to Canada's first colonist, Louis Hebert, that the veteran sea veteran of the British and the pretty little-haired driver, were welcomed by provincial and civic officials, the clergy and the fighting services. "I'm not making the announcement," the speaker of the same little-tattooed man who had shivered, making his way shyly to the crowd. Digging into his pocket, he produced a little box, and dropped it into the pit. He spoke a few words to Miss Wright, then turned and disappeared in the crowd. "I could not make it all said Mac," the speaker said. "I thought I could not make a not serving overseas."

Experiment in Play

Rough Youngsters Evicted From London Are Being Reformed

"The 'goodie' and 'bad' kids" who were sent to London after the war, are being reformed. The boys were put on parade for one hour every week, the reporter says. They were told to stand in a line, then play, and then they were sent to the city hall. The boys were told to stand in a line, then play, and then they were sent to the city hall. The boys were told to stand in a line, then play, and then they were sent to the city hall.

A Giant Flywheel

Made in Britain For Use In South African Mines

In Two minutes a load of eight tons can be brought up from a mine 1,000 feet deep by an electric winding system from Great Britain to one of the City Deep mines in South Africa.

The winding system is a giant flywheel, described by the successful engineer, as the "giant flywheel."
